

# How to make a seed packet!

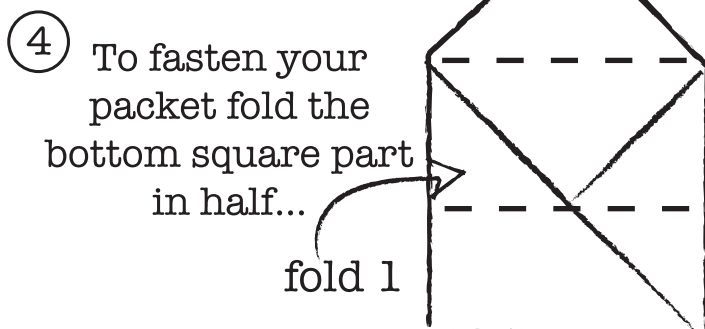

- ① Start with a square of paper - a cut down piece of A4 works well. Fold the paper in half to make a neat triangle.

- ② Fold each of the two sides of the triangle in. The folds need to be a third of the way in from each edge (on A4 this will be at approx 99 and 198mm)

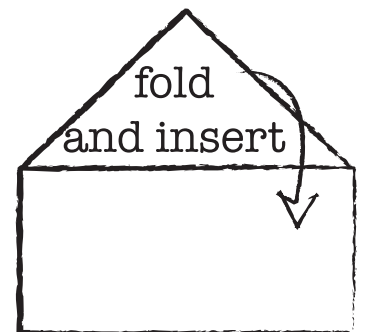

- ③ Tuck one folded edge inside the other to secure. Your seeds can now be put in the packet - open the packet at the top, drop the seeds in - make sure they go right to the bottom.

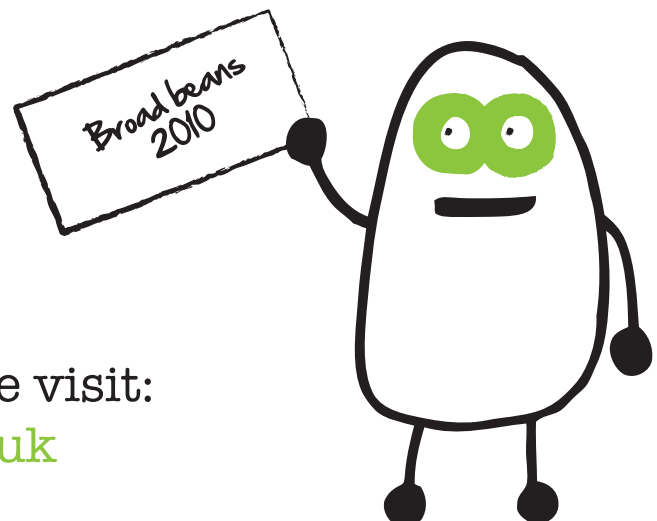

- ④ To fasten your packet fold the bottom square part in half...

...then fold the top flap down and insert it into the slot that has been created.

- ⑤ Write on important details - seed type, date saved etc then stand back and admire your lovely new seed packet
